Experience

**UI / UX Designer &
Frontend Developer**

Frisseblikken.com

Utrecht, Netherland - Fulltime

Aug 2016 - Sept 2019

I worked on web design projects including the responsiveness for the mobile version. Normally we do the kickoff meeting first and I get a rough wireframe from the Project Manager, then I create the mockup. Got feedback and iterate. When the mockup is final I convert it into HTML and SCSS. Working as a designer and frontend developer makes me know which design is effective and which one is not for the development process.

Co-founder & Designer

Duosweb.com

Yogyakarta, Indonesia

Mar 2018 - Now

Duosweb is a small web development agency that I created with my programmer friend in 2018. I have some roles in this team, as Project Manager who talks to client and gathering requirement, as UI/UX designer of course, and sometimes I also do the frontend part. This year we starting to expand the service in mobile app development. In this team, I learn how to manage projects, create a project timeline, and also handling clients directly.

Design Youtuber

**Youtube.com/
MasKukuhaldy**

Yogyakarta, Indonesia

Mar 2019 - Now

In my channel, I talk about UI/UX and design tutorials. With me creating videos every week it means I always learn new things and keep up-to-date in the design world. It also shows that I am capable to communicate my ideas clearly to others. With this channel, I want to educate this generation in my country about designs, because we don't get that much in our formal education, especially the ones who can't afford colleges. That's why I use the Indonesian language in my videos. Second, it helps me grow my brand, to get more exposure to potential clients.

Mobile App Designer

Jala.tech

Yogyakarta, Indonesia -

Freelance

2018

Jala is an IoT company that develops a device to detect water quality to help farmers get a better result. I design the whole mobile app screens, from wireframe, mockup, and also a prototype. In the app, farmers and farmer-owners can log data about their ponds and see their pond's condition in real-time. I also involved in the actual test with the farmers in the first version, which make me develop the second version of the UI. And now it's live on Google Play and has been used by the farmers in Indonesia.

**Freelance UI/UX
Designer**

Remote

2015 - Now

I start my career in UI/UX design as a freelancer, whether it's directly with clients or from freelance websites like 99designs.com. I've been freelancing since 2012 but I was a logo designer back then. So I've been working with overseas clients my whole career, and I enjoy working remotely.

Education

Duta Wacana Christian University

Bachelor of Informatics, GPA 3.69

Yogyakarta, Indonesia. Graduated in 2015
